

Property Listings Submission

For Sale and For Rent Listings

XML Specification

Version 1.0, Last Updated 05/05/2013

PREFACE

This document defines the XML syntax required by Zaglist.com for property listing submissions.

Intended Audience

This guide assumes that the reader:

- Is an experienced web or application developer
- Is familiar with XML
- Is familiar with the real estate industry

Organization of This Document

This document is organized as follows:

Chapter 1 - Introduction

Explains what Zaglist.com does, how Zaglist.com does it and why you should use the XML Feed for syndicating your property listings to Zaglist.com.

Chapter 2 - XML Feed Specification

Explains the different XML elements that are included within Zaglist.com data feed.

Chapter 3 - Element Descriptions

Provides additional information regarding specific elements.

Chapter 4 - Sample XML

Provides an example of how a complete feed should look.

Chapter 5 - Feed Development Checklist

Provides an overview of the key aspects to consider before submitting your feed to Zaglist.com.

How to Contact Customer Support

For comments or questions in regards to submitting your data feed, contact our Customer Support team at support@zaglist.com.

CHAPTER 1: INTRODUCTION

About Zaglist

Zaglist.com® is a listing service for real estate for sale and for rent in the United States of America.

Zaglist.com® provides a user-friendly platform for individuals and licensed real estate agents to post high quality real estate classified advertising and effective, and inexpensive promotion. This is where sellers agents and buyers come together.

How Zaglist's Data Cycle Works

Currently Zaglist.com runs its data cycle once per day. This is how the data is progressed:

1. Gathering of property listings data
2. Normalizing the listing data
3. Filtering invalid listings
4. Downloading photos for new listings
5. Pushing listings to the live website

Data Delivery Methods

Zaglist.com can process feeds that are stored on either a web server or you can upload xml file. After you have configured your system to generate a feed on a daily basis, you can submit the full feed url to Zaglist.com for inclusion.

Handling Illegal XML Characters

When an XML element is parsed, all of the text within the XML tags is also parsed. This is done because it is possible and highly likely, that the text will contain other XML elements. Therefore, there are certain characters that are deemed illegal since they will be misinterpreted by the XML parser. To avoid causing the XML parser to break, there are two preferred methods:

Entity Reference

Replace the characters with their corresponding entity reference:

For example, the following is an incorrect way to include an ampersand:

`<example>Brokers & Agents</example>`

The correct method is:

`<example>Brokers &#amp; Agents</example>`

CDATA Section

Enclose the tag value within a CDATA section. A CDATA section begins with "`<![CDATA[`" and ends with "`]]>`":

Entity Reference Illegal Character Description of Character

`<` < Less Than

`>` > Greater Than

`&#amp;` & Ampersand

`&#apos;` ' Apostrophe

`"` " Quotation Mark

Condition Example

Without CDATA `<example>this is the value</example>`

With CDATA `<example><![CDATA[this is the value]]></example>`

CHAPTER 2:

```

CHAPTER 3:

ELEMENT DESCRIPTIONS

Repeatable Tag

You will notice that several tags in the feed specification are marked “repeatable tag”. These tags can have multiple instances with different values.

For example, if a property has multiple images, you would specify it like this in the XML feed:

```
<photos>
<photo>
<photo-url>http://www.zaglist.com/PropertyImages/Delavan-28a3b854032.jpg</photo-url>
<photo-tag>Land</photo-tag>
<photo-seq-number>1</ photo-seq-number>
</photo>
<photo>
<photo-url></photo-url>
<photo-tag>Land</photo-tag>
<photo-seq-number>2</ photo-seq-number>
</photo>
</photos>
```

Boolean Tags

All the tags that start with “has” or “is” have a value of “yes” or “no”. For example:

```
<has-fireplace>yes</has-fireplace>
<is-pets-allowed> no</is-pets-allowed >
```

Please leave blank if the value is unknown.

Multiple Pictures

Zaglist.com accepts multiple photos (maximum 16 for each property and we encourage you to submit multiple photos in the feed. Pictures will be displayed in the order they are received for each corresponding listing. Please make sure to include a picture sequence number.

```
<photos>
<photo>
<photo-url>http://www.zaglist.com/PropertyImages/Delavan-28a3b854032.jpg</photo-url>
<photo-tag>Land</photo-tag>
<photo-seq-number>1</ photo-seq-number>
</photo>
<photo>
<photo-url></photo-url>
<photo-tag>Land</photo-tag>
<photo-seq-number>2</ photo-seq-number>
</photo>
</photos>
```

Half Bathrooms

Properly handling half bathrooms is essential to maintaining a high standard of data quality. So Zaglist.com offers two different approaches for supplying bathroom information. For example the property has two full bathrooms and one half bathroom.

The preferred method is to list the number of full and half bathrooms separately.

Example:

```
<num-full-bathrooms>2</num-full-bathrooms>
```

```
<num-half-bathrooms>1</num-half-bathrooms>
```

However, if the source has a single bathroom field, a single bathroom may be also used in the Zaglist.com feed.

Example:

```
<num-bathrooms>2.5</num-bathrooms>
```

Please note that this method breaks down when a property contains more than one half bathroom. By adding another ".5" to the total, the value will incorrectly record "3" bathrooms.

Element Dictionary

The majority of the elements contained within Zaglist.com XML feed specification are self-explanatory, but for those that may be ambiguous, the following list is provided.

Element	Required	Format	Section	Description
unique-listing-id	Yes	String or number	property	This number should be unique for your each property
listing-expiration-date	Yes	Date	property	Date, after which, we will not display your listing to public
street-address	Yes	String	location	Street address of property
city-name	Yes	String	location	City name of property
county	Yes	String	location	County name of property
state-code	Yes	String	location	State Code i.e. NY, NJ, CA
zip-code	Yes	Number	location	Zip Code
is-display-address	No	Boolean	location	Accepted Values: <ul style="list-style-type: none"> • Yes • No If a value is not provided or cannot be recognized, the value will default to 'Yes' .
longitude	No	Decimal	location	Longitude of the property.
latitude	No	Decimal	location	Latitude of the property.
num-rooms	Yes, Not required if property type is Land	Integer	details	Number of rooms
num-bedroom	Yes, Not required if property type is Land	Integer	details	Number of bed-rooms
num-full-bathrooms	Yes, Not required if property type is Land	Integer	details	Number of full baths
num-half-bathrooms	Yes, Not required if property type is Land	Integer	details	Number of half baths
garage	Yes, Not required if property type is Land	Enumerated	details	Recommended Values: <ul style="list-style-type: none"> • None • 1 • 2 • 3+ • Park Space • Carport
basement	Yes, Not required if property type is Land	Enumerated	details	Recommended Values: <ul style="list-style-type: none"> • None • Crawlspace • Finished • Partially Finished • Unfinished
exterior-finish	Yes, Not required if property type is Land	Enumerated	details	Recommended Values: <ul style="list-style-type: none"> • Vinyl/Aluminium • Asbestos • Shingles • Clapboard • Brick/Stone • Mason/Stucco • Other
